

## Coding Challenge

We require a fully functional webstore with mock products, Ipsum lorem copy and mock pricing.

**\*Please do not change the colour scheme when building.**

You can use any logo as long as it is within the colour scheme and you can choose any type of item as long as it's a clothing range. Key is to be able to ensure that with the range you are showcasing that you also supply functionality like colour selection and sizes etc.

You can use JavaScript, HTML, CSS, React, Bootstrap and JQuery in the challenge, we are not too concerned.

The key aspect for me is that you need to mimic the images attached, you need to treat this design as an approved brief from the client.

The images that have been approved by client are attached.

NB get as close to the images as possible and don't be lazy, make sure buttons work etc.

Also I am not expecting a massive catalogue of products so what we can do is selected a category or two and then display a maximum of four products within each of them.

We will be checking for the following;

**Site Wide:**

- Code structure
- Responsiveness NB

**Homepage Functionality:**

- Banner slider with floating copy
- No broken links
- Product slider
- Add to cart

**Category Page Functionality**

- Add to cart functionality
- Color Selection
- Selectable Filters
- Size Selection

**Product Page Functionality:**

- Color Selection
- Size Selection
- Quantity Selection
- Image carousel
- Add to cart

**Checkout Page Functionality:**

- Address input
- Calculator

**Deadline Instructions:**

Please submit a github link and a live page view of your work to [Ryan@lifechoices.co.za](mailto:Ryan@lifechoices.co.za) no later than Friday the 28<sup>th</sup> of February at 3pm.
